

Replacing the tray

2.5mm Allen key

joint cover moulding

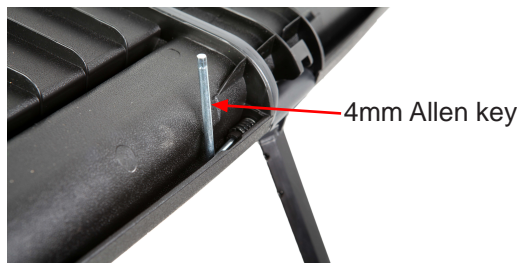

1 Insert a 2.5mm Allen key into each of the grub screws in the top of the stem and loosen the screw by about 2 turns.

2 Pull the tray off the end of the stem, taking care not to lose the joint cover moulding.

3 Fit the joint cover moulding to the new tray, insert the spigot of the new tray into the top of the stem, and retighten the screws as shown in step 1.

4 Tighten the screws as **tight as the Allen key will allow you to.**

Increasing the tray friction

4mm Allen key

1 Insert a 4mm Allen key into the screw in the back of the tray and tighten by quarter turns until you get the desired friction.

Replacing the base

2.5mm Allen key

1 Push the Jazz stand to its lowest position. **IT IS IMPORTANT TO DO THIS BEFORE PROCEEDING TO THE NEXT STEP.**

2 Slacken the two screws at the base of the stem by about a turn.

3 The old base can now be slid off and the new one fitted.

DO NOT EXTEND OR SHORTEN THE STEM WHILST THE BASE IS REMOVED.

4 Re-tighten the two screws at the bottom of the stem. Do not over tighten

The Jazz III Stand

Maintenance instructions

Replacing the stem

1 Push the Jazz stand to its lowest position and then extend the innermost stem just enough to expose the two screw holes at the top of the stem. **IT IS IMPORTANT TO DO THIS BEFORE PROCEEDING TO THE NEXT STEP.**

2 Follow the procedures described on the previous page for replacing the tray and base respectively.

Note that the stem should be fitted to the base so that the holes at the top of the stem are on the same side to the screws in the base.

CORRECT

INCORRECT

IMPORTANT NOTE ABOUT THE STEM

Before fitting the new stem make sure that none of the plastic slider elements is protruding beyond the end of the stem.

If any slider is protruding beyond the end of the stem, grasp the stem and push down firmly on a horizontal surface.

DO NOT EXTEND OR SHORTEN THE STEM IN ANY OTHER WAY WHILST IT IS REMOVED FROM THE BASE.
